Proposal Form Contact & Identity Validation - PRD

Mobile Number, Email ID, Aadhaar Number, PAN Number and Pincode

1. Objective

This document defines Proposal Form validation rules and separate field-level validation messages for Mobile Number, Email ID, Aadhaar Number, PAN Number, and Pincode. The backend must validate all applicable fields before submitting the proposal to Policy Planner and return all detected field-level errors in a single HTTP 400 response.

2. Mobile Number Validation

Rule	Validation
Required	Yes
Data Type	String
Accepted Format 1	10-digit Indian mobile number
Accepted Format 2	+91 followed by 10-digit Indian mobile number
Starting Digit	Must start with 6, 7, 8, or 9
Spaces / Hyphens	Not allowed
Alphabets / Special Characters	Not allowed
Other Country Codes	Not allowed

Regex:

^(?:\+91)?[6-9][0-9]{9}$

Normalization:

+919876543210 -> 9876543210

Valid Examples:

- 9876543210
- +919876543210

Invalid Examples:

- 1234567890
- 987654321
- 98765432100
- +91-9876543210
- 98765abc10

2.1 Mobile Number Validation Messages

Scenario	Example	Validation Message
Blank / missing		Mobile number is required
Invalid length	987654321	Mobile number must contain exactly 10 digits
Invalid starting digit	1234567890	Mobile number must start with 6, 7, 8, or 9
Invalid +91 format	+91-9876543210	Mobile number must be a valid 10-digit Indian number or +91 followed by 10 digits

Alphabet / special character	98765abc10	Mobile number must contain digits only, with optional +91 prefix

3. Email ID Validation

Rule	Validation
Required	Yes
Data Type	String
@ Symbol	Exactly one required
Local Part	Required
Domain	Required
Domain Extension	Required
Spaces	Not allowed
Multiple @	Not allowed
Blank Value	Not allowed

Regex:

^[A-Za-z0-9._%+-]+@[A-Za-z0-9.-]+\.[A-Za-z]{2,}$

Valid Examples:

- sample@example.com
- tejas.jawale@company.in

Invalid Examples:

- sample
- sample@
- @example.com
- sample @example.com
- sample@@example.com
- sample@example

3.1 Email ID Validation Messages

Scenario	Example	Validation Message
Blank / missing		Email ID is required
Missing @	sampleexample.com	Email ID must contain a valid @ symbol
Missing local part	@example.com	Email ID must contain a valid username before @
Missing domain	sample@	Email ID must contain a valid domain
Missing domain extension	sample@example	Email ID must contain a valid domain extension
Space / multiple @ / malformed format	sample@@example.com	Invalid email ID format

4. Aadhaar Number Validation

Rule	Validation
Required	Yes, if Aadhaar is mandatory for the proposal
Data Type	String
Length	Exactly 12 digits
Allowed Characters	Digits only
Spaces / Hyphens	Not allowed

Alphabets / Special Characters	Not allowed
Repeated Digit Rule	The same digit must not be repeated for all 12 positions
All-Zero Value	000000000000 is invalid
UIDAI Verification	Not performed by this application-level validation

Format Regex:

^[0-9]{12}$

Repeated Digit Check:

^(\d)\1{11}$ -> must be rejected

Valid Format Example:

- 123456789012

Invalid Examples:

- 000000000000 - repeated digit / all-zero dummy value
- 111111111111 - repeated digit
- 999999999999 - repeated digit
- 12345678901 - less than 12 digits
- 1234567890123 - more than 12 digits
- 1234 5678 9012 - spaces not allowed
- 1234-5678-9012 - hyphens not allowed
- ABCD56789012 - alphabets not allowed
- 12345678@012 - special character not allowed

4.1 Aadhaar Number Validation Messages

Scenario	Example	Validation Message
Blank / missing when mandatory		Aadhaar number is required
Less / more than 12 digits	12345678901	Aadhaar number must contain exactly 12 digits
Non-numeric characters	ABCD56789012	Aadhaar number must contain digits only
Spaces / hyphens / special characters	1234-5678-9012	Invalid Aadhaar number format
All-zero value	000000000000	Aadhaar number cannot contain the same digit repeated 12 times
Any repeated digit 12 times	111111111111	Aadhaar number cannot contain the same digit repeated 12 times

Note: Passing these rules means the value passed BoltPe application validation only. It does not confirm that the Aadhaar number is issued or valid with UIDAI.

5. PAN Number Validation

Rule	Validation
Required	Yes, if PAN is mandatory for the proposal
Data Type	String
Length	Exactly 10 characters
First 5 Characters	Uppercase alphabets
Next 4 Characters	Digits
Last Character	Uppercase alphabet
Spaces / Special Characters	Not allowed

Lowercase	Normalize to uppercase before validation if product requirement allows

Required Format:

AAAAA9999A

Regex:

^[A-Z]{5}[0-9]{4}[A-Z]$

Valid Example:

- ABCDE1234F

Invalid Examples:

- abcde1234f
- ABCDE12345
- ABCD1234F
- ABCDE123F
- ABCDE12#4F
- ABCDE 1234F

5.1 PAN Number Validation Messages

Scenario	Example	Validation Message
Blank / missing when mandatory		PAN number is required
Incorrect length	ABCD1234F	PAN number must be exactly 10 characters
Invalid first five characters	AB12E1234F	First 5 PAN characters must be alphabets
Invalid middle four characters	ABCDE12A4F	PAN characters 6 to 9 must be digits
Invalid last character	ABCDE12345	Last PAN character must be an alphabet
Malformed / special character	ABCDE12#4F	Invalid PAN number format

6. Pincode Validation

Rule	Validation
Required	Yes
Data Type	String
Length	Exactly 6 digits
First Digit	Must be 1-9; cannot start with 0
Allowed Characters	Digits only
Spaces / Hyphens	Not allowed
Alphabets / Special Characters	Not allowed

Regex:

^[1-9][0-9]{5}$

Valid Examples:

- 110001
- 411033
- 400001

Invalid Examples:

- 011001
- 11001
- 1100011
- 411 033
- 411-033
- 41A033

6.1 Pincode Validation Messages

Scenario	Example	Validation Message
Blank / missing		Pincode is required
Less / more than 6 digits	11001	Pincode must contain exactly 6 digits
Starts with 0	011001	Pincode must not start with 0
Alphabet / non-numeric	41A033	Pincode must contain digits only
Space / hyphen / special character	411-033	Pincode must be a valid 6-digit Indian pincode and must not start with 0

7. Validation Execution Order

1. Validate Mobile Number and normalize +91 when present.
2. Validate Email ID.
3. Validate Aadhaar Number, including the repeated-digit rule.
4. Validate PAN Number.
5. Validate Pincode.
6. Collect all field-level validation errors.
7. If no validation errors exist, continue Proposal Form processing.

8. Final Validation Summary

Field	Mandatory	Final Validation
Mobile Number	Yes	10 digits or +91 + 10 digits; starts with 6-9
Email ID	Yes	Valid email syntax with username, @, domain and extension
Aadhaar Number	As per proposal requirement	Exactly 12 digits; repeated same digit 12 times is invalid
PAN Number	As per proposal requirement	AAAAA9999A format
Pincode	Yes	Exactly 6 digits; first digit must be 1-9

9. API Error Handling

If one or more validations fail, BoltPe should return HTTP 400 Bad Request and include all detected field-level errors together in fieldErrors. Each field should return the most specific applicable message.

Example - Multiple Validation Errors:

```
{
 "status": 400,
 "error": "Bad Request",
 "message": "Proposal validation failed",
 "fieldErrors": {
```

```
  "mobileNumber": "Mobile number must start with 6, 7, 8, or 9",
  "email": "Invalid email ID format",
  "aadharNumber": "Aadhaar number cannot contain the same digit repeated 12 times",
  "panNumber": "Invalid PAN number format",
  "pincode": "Pincode must not start with 0"
 }
}
```

10. Validation Message Catalogue

The following message catalogue is the backend contract for field-level validation. Messages should be returned against the corresponding field key.

mobileNumber

- Mobile number is required
- Mobile number must contain exactly 10 digits
- Mobile number must start with 6, 7, 8, or 9
- Mobile number must be a valid 10-digit Indian number or +91 followed by 10 digits
- Mobile number must contain digits only, with optional +91 prefix

email

- Email ID is required
- Email ID must contain a valid @ symbol
- Email ID must contain a valid username before @
- Email ID must contain a valid domain
- Email ID must contain a valid domain extension
- Invalid email ID format

aadharNumber

- Aadhaar number is required
- Aadhaar number must contain exactly 12 digits
- Aadhaar number must contain digits only
- Invalid Aadhaar number format
- Aadhaar number cannot contain the same digit repeated 12 times

panNumber

- PAN number is required
- PAN number must be exactly 10 characters
- First 5 PAN characters must be alphabets
- PAN characters 6 to 9 must be digits
- Last PAN character must be an alphabet
- Invalid PAN number format

pincode

- Pincode is required
- Pincode must contain exactly 6 digits
- Pincode must not start with 0

- Pincode must contain digits only
- Pincode must be a valid 6-digit Indian pincode and must not start with 0
