Health Insurance Module — API Documentation

1. Get Health Insurance Plans

Endpoint

GET https://policyplanner.com/health-insurance//companies/plans?policy=Health

Method

`GET`

Query Parameter

Parameter	Type	Required	Value
`policy`	String	Yes	`Health`

Example

GET https://policyplanner.com/health-insurance//companies/plans?policy=Health

Response

```
{
  "success": true,
  "count": 22,
  "policy_filter": "Health",
  "data": [
    {
      "api_type": "https://policyplanner.com/health-insurance/star/1003/218/premium"
    },
    {
      "api_type": "https://policyplanner.com/health-insurance/sbi/1004/183/premium"
    },
    {
      "api_type": "https://policyplanner.com/health-insurance/sbi/1004/225/premium"
    }
  ]
}
```

The `api_type` from this response must be used to call each individual plan's Premium API.

---

2. Health Insurance Premium API

Each `api_type` returned by the Plans API is a Premium API.

API Pattern

POST https://policyplanner.com/health-insurance/{company}/{companyId}/{planId}/premium

Example

POST https://policyplanner.com/health-insurance/sbi/1004/225/premium

Headers

Content-Type: application/json

---

3. Request Payload

```
{
  "coverAmount": 1000000,
  "zone": "1",
  "age": 30,
  "sage": null,
  "c1age": null,
  "c2age": null,
  "c3age": null,
  "c4age": null
}
```

Request Parameters

Parameter	Type	Required	Description
`coverAmount`	Number	Yes	Selected Health Insurance coverage amount
`zone`	String	Yes	Insurance zone

`age`	Number	Yes	Self/primary member age
`sage`	Number / null	No	Spouse age
`c1age`	Number / null	No	Child 1 age
`c2age`	Number / null	No	Child 2 age
`c3age`	Number / null	No	Child 3 age
`c4age`	Number / null	No	Child 4 age

---

4. Allowed Cover Amounts

The Health Insurance module should allow **only the following cover amounts**:

#	Label	Value
1	50 Thousand	`50000`
2	75 Thousand	`75000`
3	5 Lakh	`500000`
4	7 Lakh	`700000`
5	10 Lakh	`1000000`
6	15 Lakh	`1500000`
7	20 Lakh	`2000000`
8	25 Lakh	`2500000`
9	30 Lakh	`3000000`
10	35 Lakh	`3500000`

11	40 Lakh	4000000
12	45 Lakh	4500000
13	50 Lakh	5000000
14	75 Lakh	7500000
15	1 Crore	10000000
16	2 Crores	20000000
17	3 Crores	30000000
18	4 Crores	40000000
19	5 Crores	50000000

Frontend Configuration

```
const coverAmountOptions = [
  { label: '50 Thousand', value: '50000' },
  { label: '75 Thousand', value: '75000' },
  { label: '5 Lakh', value: '500000' },
  { label: '7 Lakh', value: '700000' },
  { label: '10 Lakh', value: '1000000' },
  { label: '15 Lakh', value: '1500000' },
  { label: '20 Lakh', value: '2000000' },
  { label: '25 Lakh', value: '2500000' },
  { label: '30 Lakh', value: '3000000' },
  { label: '35 Lakh', value: '3500000' },
  { label: '40 Lakh', value: '4000000' },
  { label: '45 Lakh', value: '4500000' },
  { label: '50 Lakh', value: '5000000' },
  { label: '75 Lakh', value: '7500000' },
  { label: '1 Crore', value: '10000000' },
  { label: '2 Crores', value: '20000000' },
  { label: '3 Crores', value: '30000000' },
```

```
  { label: '4 Crores', value: '40000000' },
  { label: '5 Crores', value: '50000000' }
];
```

---

5. Age / Member Parameters

The Premium API supports:

age → Self / Primary Insured
sage → Spouse
c1age → Child 1
c2age → Child 2
c3age → Child 3
c4age → Child 4

Individual Policy

For only self:

```
{
  "coverAmount": 1000000,
  "zone": "1",
  "age": 30,
  "sage": null,
  "c1age": null,
  "c2age": null,
  "c3age": null,
  "c4age": null
}
```

Expected members:

```
[
  {
    "label": "self",
    "age": 30
  }
]
```

Self + Spouse

```
{
```

```
  "coverAmount": 1000000,
  "zone": "1",
  "age": 30,
  "sage": 28,
  "c1age": null,
  "c2age": null,
  "c3age": null,
  "c4age": null
}
```

Family — Self + Spouse + 2 Children

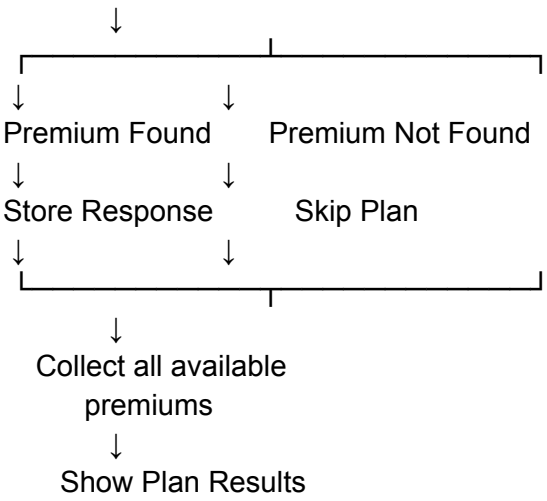

```
{
  "coverAmount": 1000000,
  "zone": "1",
  "age": 35,
  "sage": 32,
  "c1age": 8,
  "c2age": 5,
  "c3age": null,
  "c4age": null
}
```

---

6. Premium Calculation Flow

The complete Health Insurance flow should work dynamically.

```
User selects Health Insurance
          ↓
     Select Cover Amount
          ↓
      Select Zone
          ↓
      Enter Member Ages
          ↓
GET /companies/plans?policy=Health
          ↓
    Receive all api_type URLs
          ↓
    Loop through every API
          ↓
POST Premium API
          ↓
    Send same payload
```

---

7. Example Premium Request

For:

- Cover Amount: **10 Lakh**
- Zone: **1**
- Self Age: **30**
- Spouse: Not selected
- Children: Not selected

Request

POST https://policyplanner.com/health-insurance/sbi/1004/225/premium

```
{
  "coverAmount": 1000000,
  "zone": "1",
  "age": 30,
  "sage": null,
  "c1age": null,
  "c2age": null,
  "c3age": null,
  "c4age": null
}
```

Response

```
{
  "companyId": "1004",
  "planId": "225",
```

```
  "planName": "Health Edge Plan",
  "coverAmount": 1000000,
  "zone": 1,
  "noOfAdults": 1,
  "noOfChildren": 0,
  "eldestActualAge": 30,
  "eldestLookupAge": 30,
  "totalBasePremium": 9980,
  "totalPayablePremium": 9980,
  "totalDiscount": 0,
  "members": [
    {
      "label": "self",
      "age": 30
    }
  ]
}
```

---

8. Premium Response Fields

Field	Type	Description
`companyId`	String	Insurance company ID
`planId`	String	Insurance plan ID
`planName`	String	Insurance plan name
`coverAmount`	Number	Selected coverage amount
`zone`	Number	Selected insurance zone
`noOfAdults`	Number	Total adult members
`noOfChildren`	Number	Total child members
`eldestActualAge`	Number	Actual age of eldest member
`eldestLookupAge`	Number	Age used for premium lookup
`totalBasePremium`	Number	Base premium
`totalPayablePremium`	Number	Final payable premium

`totalDiscount`	Number	Discount applied
`members`	Array	Insured member information
`company`	Object	Insurance company information
`plan`	Object	Insurance plan information
`features`	Array	Plan features

---

9. Premium Not Available

If a plan does not support the selected combination, the API may return:

```
{
  "error": "No premium found for eldest lookup age 30 (from actual 30), zone 1, adults 2, children 2"
}
```

Handling Rule

This should be treated as a **plan-level failure**, not a complete API failure.

For example:

```
Plan 1  → Success      → Add
Plan 2  → Success      → Add
Plan 3  → No Premium   → Skip
Plan 4  → Success      → Add
Plan 5  → No Premium   → Skip
Plan 6  → Success      → Add
...
```

The application must continue processing all remaining `api_type` APIs.

---

10. Complete Integration Example

Step 1 — Get Plans

GET https://policyplanner.com/health-insurance//companies/plans?policy=Health

Suppose the response contains:

```
{
  "data": [
    {
      "api_type": "https://policyplanner.com/health-insurance/star/1003/218/premium"
    },
    {
      "api_type": "https://policyplanner.com/health-insurance/sbi/1004/225/premium"
    },
    {
      "api_type": "https://policyplanner.com/health-insurance/nic/1005/176/premium"
    }
  ]
}
```

Step 2 — Call Every API

Each API receives:

```
{
  "coverAmount": 1000000,
  "zone": "1",
  "age": 30,
  "sage": null,
  "c1age": null,
  "c2age": null,
  "c3age": null,
  "c4age": null
}
```

Step 3 — Collect Successful Results

```
[
  {
    "companyId": "1003",
    "planId": "218",
    "planName": "Star Health Plan",
    "totalPayablePremium": 10500
  },
  {
    "companyId": "1004",
    "planId": "225",
    "planName": "Health Edge Plan",
    "totalPayablePremium": 9980
```

```
  }
]
```

Step 4 — Skip Failed Plans

If NIC returns:

```
{
  "error": "No premium found..."
}
```

NIC should simply be excluded from the final available-plan list.

---

11. Cover Amount Validation

Only these **19 values** should be accepted by the Health Insurance module:

50000
75000
500000
700000
1000000
1500000
2000000
2500000
3000000
3500000
4000000
4500000
5000000
7500000
10000000
20000000
30000000
40000000
50000000

Any other `coverAmount` should be considered invalid.

Example Invalid Request

```
{
```

```
  "coverAmount": 1200000,
  "zone": "1",
  "age": 30,
  "sage": null,
  "c1age": null,
  "c2age": null,
  "c3age": null,
  "c4age": null
}
```

`1200000` is **not present** in the supported cover amount list and therefore should not be sent to the Premium APIs.

---

12. Final API Structure

API	Method	Purpose
`/health-insurance//companies/plans?policy=Health`	`GET`	Fetch all available Health Insurance Premium API URLs
`/health-insurance/{company}/{companyId}/{planId}/premium`	`POST`	Calculate premium for each individual plan

Premium API Pattern

https://policyplanner.com/health-insurance/
{company}/
{companyId}/
{planId}/
premium

Supported Cover Amounts

50 Thousand
75 Thousand
5 Lakh
7 Lakh
10 Lakh
15 Lakh
20 Lakh
25 Lakh

30 Lakh
35 Lakh
40 Lakh
45 Lakh
50 Lakh
75 Lakh
1 Crore
2 Crores
3 Crores
4 Crores
5 Crores

Important: The `coverAmount` should always be sent as the corresponding numeric `value`, not the display `label`.
